

TOSIBOX™ ITS Networking & Cybersecurity Platform

ITS Networking...Transformed.

TOSIBOX is the world's first automated and secure ITS Networking platform. Our patented technology is inspired by traditional IT and designed for the scope and scale of the connected traffic world.

Securing a distributed ITS network is incredibly expensive and difficult to scale. Attacks and breaches present massive risks to your company's operations and reputation. Managing your company's ITS deployments and network access using traditional IT has proven to be too expensive, complicated, labor intensive and insecure in today's connected world.

That's why TOSIBOX® created the world's first fully automatic, open and cybersecure end-to-end ITS networking Platform. The TOSIBOX platform makes your ITS networks invisible from the Internet, eliminates network-based attacks, secures remote access at scale, provides persistent data connections to anywhere, and accelerates your overall digitization strategy, and all while reducing or eliminating your cybersecurity profile.

What we've Automated

- ✓ Point-to-point layer 2 & layer 3 VPN networks
- ✓ Firewall
- ✓ 256 bit AES Encryption
- ✓ IT/OT Segmentation
- ✓ Self-healing Cloud Connections
- ✓ User Access (down to the device level)
- ✓ Cybersecurity

- ✓ Fully Automated - No Human Error
- ✓ 256 AES Encrypted Point to Point VPN
- ✓ All access Physical-First MFA
- ✓ Automated Firewall for full IT/OT segmentation
- ✓ Access down to the network, port, protocol or MAC ID
- ✓ Outbound Ports Only
- ✓ Invisible from the Internet. No Static IP or DNS Servers
