

TOSIBOX Next Generation Services Platform...

... Designed by and for
Systems Integrators

TOSIBOX

What We've Solved For BAS Networking Infrastructure

- ✓ Cost
- ✓ Complexity
- ✓ Cybersecurity
- ✓ Scalability
- ✓ Interoperability

TOSIBOX is the world's first automated and secure BAS networking platform. Our patented technology is inspired by traditional IT but designed for the scope and scale of the BAS.

Securing and connecting a company's distributed BMS, control systems and operational infrastructure is expensive and difficult to scale. Attacks and breaches present risks to systems and can impact operations and reputations. Managing BAS networks and network access using traditional IT has proven to be too expensive, complicated, labor intensive and insecure.

That's why TOSIBOX created the world's first fully automatic, open and cyber secure BAS Services Platform. The TOSIBOX platform makes operational networks invisible from the internet, eliminates network-based attacks, secures remote access at scale, provides persistent data connections to anywhere, and accelerates your digitization strategy, all while reducing or eliminating your cybersecurity risk profile. TOSIBOX has democratized digital technology and levels the playing field for organizations, no matter the size, reach or industry.

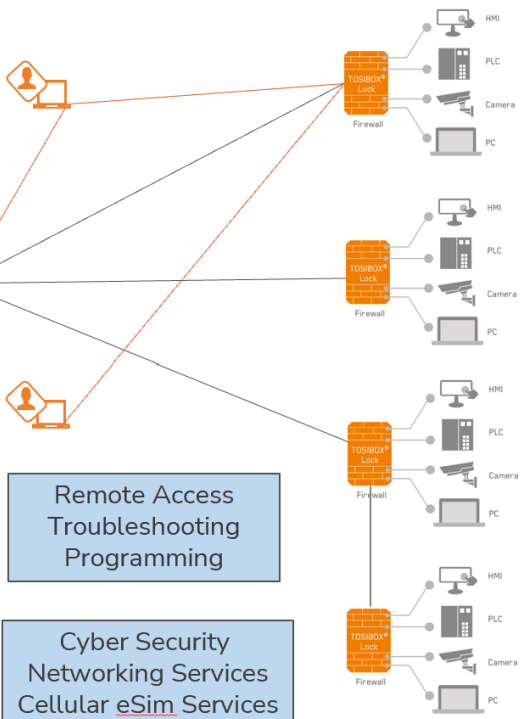

What We've Automated

- ✓ End-to-End Cybersecurity
- ✓ Network Setup, Scalability and Encryption
- ✓ Firewall
- ✓ Self-Healing Data Collection
- ✓ Centralized Access Control
- ✓ User Access

Always IT-Approved

- ✓ Fully embedded edge-to-edge cybersecurity
- ✓ Private and Invisible from the Internet
- ✓ No Static IP or need to open unusual or inbound ports
- ✓ Existing Corporate & Cloud Firewall Friendly
- ✓ Corporate IT/OT Network Segmentation
- ✓ Your data always in your hands
- ✓ Cellular, Satellite or Wi-Fi ready
- ✓ Never any 3rd party cloud routing
- ✓ Works with existing IT Infrastructure
- ✓ 1-1 NAT, DHCP, VLAN Support, Proxy Support
- ✓ ISO 27001 Certified
